- *Configuration*:  $c_1(\underline{X}), \dots, c_n(\underline{X})$ ,

$$\text{Thesis holds} \Leftrightarrow \forall(\underline{X} : c_1(\underline{X}) = \dots = c_n(\underline{X}) = 0 : t_1(\underline{X}) = \dots = t_k(\underline{X}) = 0),$$

### 3. How to use the Algebra - 2

Thesis holds  $\Leftrightarrow$   
 $\forall(\underline{X} : c_1(\underline{X}) = \dots = c_n(\underline{X}) = 0 : t_1(\underline{X}) = \dots = t_k(\underline{X}) = 0),$

- Use the Ideal  $I = (c_1, \dots, c_n) \subseteq \mathbb{Q}[X_1, \dots, X_l],$
- If  $t_j \in I,$  then:

$$t_j = f_1 c_1 + \dots + f_n c_n.$$

### 3. How to use the Algebra - 2

Thesis holds  $\Leftrightarrow$   
 $\forall(\underline{X} : c_1(\underline{X}) = \dots = c_n(\underline{X}) = 0 : t_1(\underline{X}) = \dots = t_k(\underline{X}) = 0),$

- If  $t_j \in I,$  then:

$$t_j = f_1 c_1 + \dots + f_n c_n.$$

- Gröbner Basis  $G = GB(I)$
- $t_j \in I \Leftrightarrow$  remainder on division of  $t_j$  by  $G$  is 0.
