Appendix B: Mutations Between Minkowski Polynomials

HOW TO READ THESE TABLES

A typical table row is shown in Figure 0 below. The entry f is a Laurent polynomial in variables x, y , and z . Its Newton polytope $\text{Newt}(f)$ is the three-dimensional reflexive polytope with ID equal to k in the Graded Ring Database. The expressions α_1, β_1 , and γ_1 are rational functions in x, y , and z , and there is a mutation $\phi: (x, y, z) \mapsto (\alpha_1, \beta_1, \gamma_1)$ which relates f to the Laurent polynomial g_1 with ID l_1 in the same table. Thus evaluating $f(\alpha_1, \beta_1, \gamma_1)$ yields g_1 . Similarly, there is a mutation $\psi: (x, y, z) \mapsto (\alpha_2, \beta_2, \gamma_2)$ which relates f to the Laurent polynomial g_2 with ID l_2 in the same table: evaluating $f(\alpha_2, \beta_2, \gamma_2)$ yields g_2 .

BUCKET 148

Any two Minkowski polynomials in bucket 148 are connected by a sequence of mutations, but it is not possible to insist that all of the Laurent polynomials involved are Minkowski polynomials. The smallest number of additional Laurent polynomials that one needs to add in order to connect up the bucket is two, and one can insist that both of these Laurent polynomials g, h have reflexive Newton polytopes. There are many possible choices for g and h : one such choice, together with a collection of mutations that together connect any two Minkowski polynomials in bucket 148, is shown in Figure 148 and Table 148. The Laurent polynomials g and h are indicated in red.

BUCKET 161

Any two Minkowski polynomials in bucket 161 are connected by a sequence of mutations, but it is not possible to insist that all of the Laurent polynomials involved are Minkowski polynomials. The smallest number of additional Laurent polynomials that one needs to add in order to connect up the bucket is two, and one can insist that both of these Laurent polynomials g, h have reflexive Newton polytopes. There is a unique choice of such g and h : this is shown, together with a collection of mutations that together connect any two Minkowski polynomials in bucket 161, in Figure 161 and Table 161. Note that the collection of mutations connecting bucket 161 is not unique. The Laurent polynomials g and h are indicated in red.
